Driftcheck

Keeps API docs and SDK code samples in sync with your code and opens a fix when an example breaks

The problem

What's broken today

API companies publish hundreds of code samples across docs, READMEs and SDK guides, and they quietly break whenever a parameter is renamed or an endpoint is deprecated. Developers find out first: in one design partner's support queue, 14% of tickets traced back to a docs example that no longer ran.

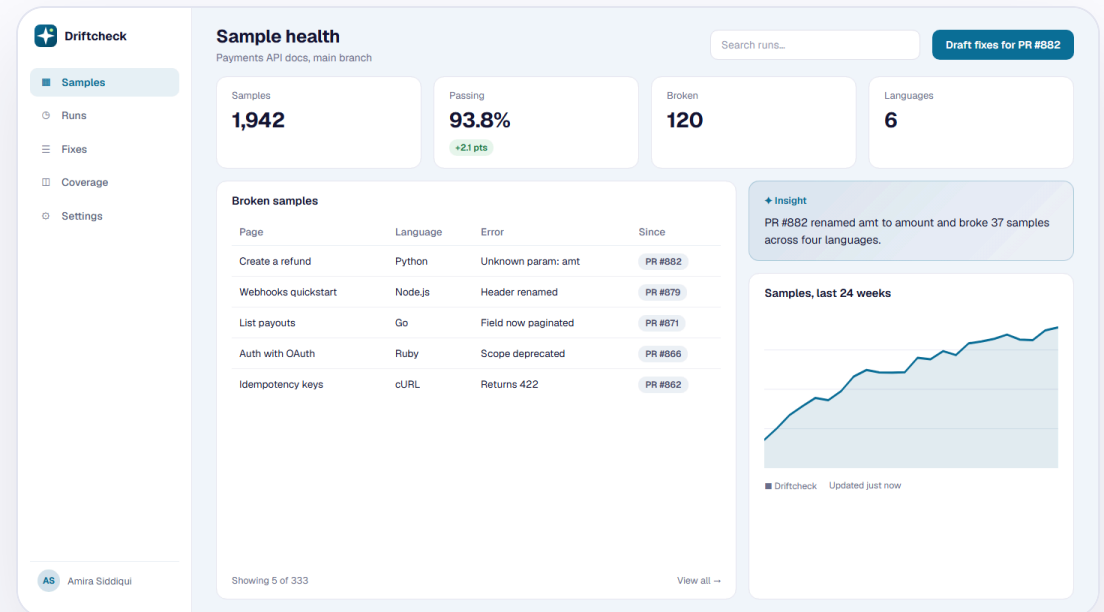

Driftcheck

Our solution

Driftcheck

Driftcheck extracts every code sample from your docs repo, runs them against a sandbox of your API on each pull request, and maps failures to the code change that caused them. It then drafts a docs fix in the same language and style and opens it as a pull request for a technical writer to approve.

Fix draft: Create a refund

Proposed changes

Line	Before	After	Reason
49	amt=1500	amount=1500	Param renamed
50	reason='dup'	reason='duplicate'	Enum value changed
53	print(r.id)	print(refund.id)	Matches guide naming
55	r.status	refund.status	Matches guide naming
58	# returns 200	# returns 201	Status code changed

 **Insight**

The same rename appears in 36 other samples; Driftcheck can batch them into one pull request.

Why now

The timing

AI coding tools let API teams ship changes several times faster, while docs are still maintained by hand, so the gap between code and examples widens every week.

Market

Companies that sell APIs or developer SDKs, an estimated 25,000 worldwide, whose docs teams spend a large share of their time on maintenance rather than new content.

How we make money

Planned pricing of US\$300 a month per docs site for up to 500 samples, then tiered by sample count; design partners pay a discounted pilot fee today.

Traction

Where we are

Design partners

640
teams

Waitlist

23,000

Code samples monitored

1,180

Broken samples found

- 9 design partners, 4 of them paying a pilot fee
- 1,180 broken samples found, 71% fixed through Driftcheck pull requests
- 640 teams on the waitlist from a single launch post

Driftcheck

The ask

What we're raising

Raising US\$1.2M pre-seed to reach 30 paying docs teams by the end of 2027

- Hire two engineers for language runtimes
- Support repos with SDKs generated from API specs
- Self-serve onboarding for the waitlist
